REVAMPING

Revamping is the process that undergoes a machine or an entire plant in poor condition to be revised and returned to its initial state of health.

BMB, thanks to its knowledge gained in mechanical field and well-equipped machine shop on its disposal, is able to revamp machinery for small, medium and large sizes.

We are able to make the complete remaking of electrical equipment, hardware and software, using the latest technology, all based on components of Commerce's primary brands in the global landscape of industrial automation.

Thanks to revamping's interventions the various production sectors has updating the components, as well as to improve production efficiency of plants, adjusting to the normal demands of increased production and the need for consistency in terms of legislation.

The fastest modernization of technological and electrical parts means, with the passage of time, increasing difficulties to keep a reliable system, based on a mechanical part still functioning but with increasing problems finding replacement parts related to engines, drives, PLC (or customized control cards) have become obsolete.

We guarantee the re-engineering of systems and complete machinery, customizing applications and implementing new rules automation to achieve greater quality control and increase production.

Thanks to our experience we can provide assistance with boarding facility, taking advantage of periods stop or weekends.

Customizations are assessed and implemented case by case in full synergy with the client its timing and business demands.
